

MEDIASITE MOSAIC

Walkthrough Guide (PC Version)

NOTE*

- Allow time to record a test presentation for your audio and video for the first time before recording your official presentation.

Launch Mediasite Mosaic

This is the Mosaic interface. The icons on the top of the menu bar are audio and video settings with which you set up before recording your presentation.

Before Recording:

1. Rename your presentation
2. Set your audio input to record and check your audio levels
3. Set your video input to record
4. Select either your entire display or a specific window to record.

During Recording

Mosaic will hide in your desktop menu bar and begin presenting. You may pause and resume your presentation.

NOTE* If you have video or audio content in your presentation, its audio will not play through the recording because you already have selected your primary microphone input.

After Recording

Prompts will appear on your display and your recorded presentations will appear under 'Presentations'. Manage your recordings at mms.etvlabs.com
